

134 Ferry Street

Year Built: 1920
 Living Area: 49,305

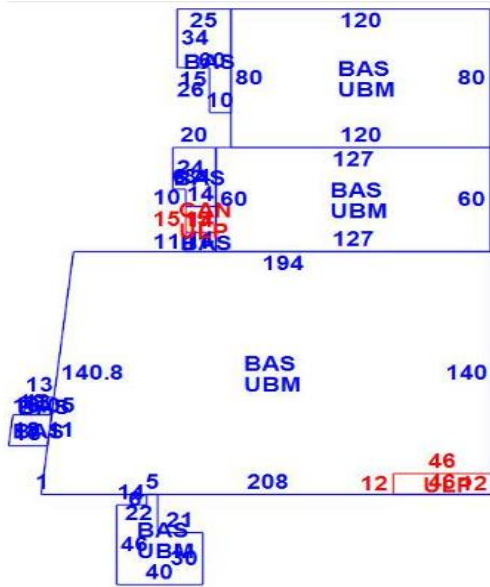

Building Photo

131 Ferry Street

Building Layout

Assuming a typical parking space size of 9 feet by 18 feet and using the generally accepted standard of 320 square feet per parking space (which includes the space required for maneuvering), a one-acre paved parking lot with marked parking spaces can fit approximately 70 to 80 parking spaces.

This estimate assumes no obstructions or features that limit the available space and assumes that the parking lot is designed with efficient use of space in mind. However, as mentioned before, the actual number of parking spaces that can fit on a one-acre paved lot may vary depending on the size of the parking spaces, the layout of the lot, and any obstructions or features that may limit the available space.

$$49,305 / 500 = 98 \text{ spaces}$$

$$49,305 / 750 = 65 \text{ spaces}$$
